

The purpose of this task is to demonstrate a basic ability to build a program that gets data from a URL and presents it.

Let's start,

You have a json resume data waiting at

https://hs-recruiting-test-resume-data.s3.amazonaws.com/allcands-full-api_hub_b1f6-acde48001122.json

(<https://bit.ly/3eTzIN4>)

Part one

Get candidate data from the URL and extract their work experience.

For each "candidate" that you find there extract the following:

1. Name of the candidate
2. Job experience (including role, dates, office location)

The application should output in the format below and alternatively as a JSON.

Time Frame: 60 minutes

Output Example:

Hello Shimon Peres,

Worked as: Programmer, From Jan/20/2013 To Dec/31/2014 in New York, NY, US

Worked as: Programmer, From Jan/02/2010 To Dec/31/2012 in Newark, NJ, US

```
{
  "Name": {
    "FirstName": "Shimon",
    "LastName": "Peres"
  },
  "JobExperience": [
    {
      "Role": "Programmer",
      "StartDate": "Jan/20/2013",
      "EndDate": "Dec/31/2014",
      "Location": "New York, NY, US"
    },
    {
      "Role": "Programmer",
      "StartDate": "Jan/02/2010",
      "EndDate": "Dec/31/2012",
      "Location": "Newark, NJ, US"
    }
  ]
}
```
